6. ☐ Interview Summary (PTO-413),
Paper No./Mail Date _____
7. ☒ Examiner's Amendment/Comment
8. ☒ Examiner's Statement of Reasons for Allowance
9. ☐ Other _____.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Laura Johnson on 2/11/2010.

The application has been amended as follows:

In the claims:

In claim 91, line 7, the words – using processing circuitry – have been added after the word determining.

In claim 93, line 11, the words – using processing circuitry – have been added after the word determining.

In claim 184, line 7, the words – using processing circuitry – have been added after the word determining.

These changes were made to ensure that the method uses a particular device, the processing circuitry, and therefore overcomes any rejection under 35 USC 101 in view of the Bilski case.

The following is an examiner's statement of reasons for allowance:

Claims 85-92, 94-105, 176, 178-181, 183, 185-188, 190, 192-195, and 239-242 define over the art in that none of the art determines stability by evaluating the matched the sensitivity. The examiner notes that the sensitivity is the transfer function to convert raw sensor data to glucose levels. The section of Say 6175752 in column 44, lines 46-64 evaluates the change in glucose before and after calibration. This change might be due to a change in sensitivity. However, as pointed out by applicant, the change may also be due to other factor (see page 21 of the last response). As such, Say does not actually evaluate the sensitivity, but rather merely evaluates the change in the sensor data, and the claims define over Say.

Claims 93, 191, 196-199, 209-218, and 247 define over the art in that none of the art determines stability by evaluating a matched data pair of sensor data and reference glucose data that is independent from the glucose sensor. In column 44, Say teaches that the calibration point is rejected if the sensor data is troublesome. As such, Say only evaluates one of the two elements of the pair, while the claim requires evaluating the pair. Therefore, the claims define over the art.

Claim 177, 184, 191, 200-208, 219-238, and 243-246 define over the art in that none of the art determines stability by evaluating an oxygen level.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ROBERT L. NASSER whose telephone number is (571)272-4731. The examiner can normally be reached on m-f 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Marmor II can be reached on 571 272-4730. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.
